Rustique Enterprises, Inc.

Re : Manufactured Housing Skirt Insulation Analysis

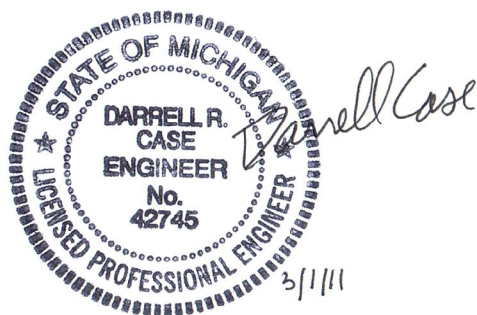

To whom it may concern:

Our engineering company has completed an annual energy cost analysis for a typical 16 foot by 80 foot manufactured home with and without Rustique's insulated skirt. We have determined the following:

Compared to a standard 16 foot by 80 foot manufactured home with standard floor insulation the addition of an insulated skirt provides the following attributes:

Rustique's Type 1 Skirt Insulation will more than double the insulating value of the floor compared to a non-skirted home. And for a typical Detroit, MI location will save approximately 15.3% on the homes annual energy cost.

Sincerely,

Darrell Case,
President, Professional Engineer
